

Evaluate with CredentialStream®

Measure, monitor, & share provider clinical competency data with CredentialStream + Evaluate

Assessing provider clinical competency requires a fair process built around relevant data and shareable outputs. With Evaluate, you get the process, content, and data needed to support a comprehensive assessment of a provider's clinical performance.

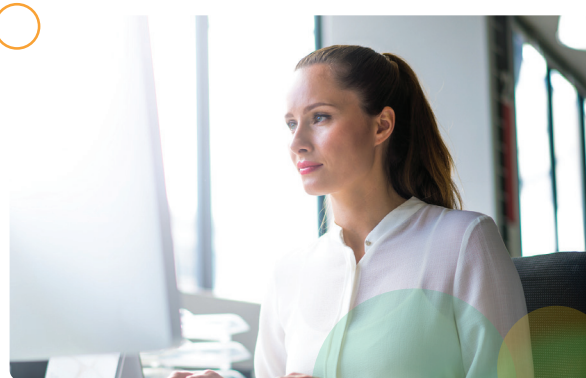

Evaluate Portfolio & Highlights

Performance Privileges

Analyzes provider-specific volumes related to granted privileges:

- Exercised privilege volumes matched to granted privileges
- Identification of low-volume and non-granted scenarios
- Comparison of individual provider data to peer data
- Presentation to providers and reviewers via the Hub

Who It's For

- Quality Department
- Risk Management
- Medical Staff Office
- Clinical Leadership (CMO, VPMA, etc.)

Why You'll Love It

- Delivers an effective, efficient, and equitable evaluation of clinical performance via defined metrics, clear processes, acquired data, and robust reporting
- Seamlessly incorporates volume, clinical performance, case review data and more in the re-credentialing process and other competency related reporting (i.e. OPPE)
- Connects to EHRs and other patient/procedure-based data systems

HealthStream®

Performance Metrics

Empowers organizations to drive evidence-based performance improvement, while supporting compliance with regulatory requirements. Indicators are linked to clinical privileges to answer the two-part question of “how many” and “how well” a provider performs

Includes all features in Performance Privileges plus

- Automation to support workflow for provider competency management (e.g. OPPE)
- Robust provider reports, including comparison data
- Library of best practice, specialty-specific performance indicators
- Customer-configurable indicators

Case Review

Allows healthcare organizations to electronically track, document, and share case review activities from initial screening through committee determination.

- Supports peer-case review process via automated referral, notification, and completion
- Presentation to reviewers via [the Hub](#)
- Best practice content templates and customer-configured forms

CredentialStream + Evaluate

CredentialStream includes everything you need to request, gather, and validate provider information and create a Source of Truth to serve downstream processes. Additionally, you are also challenged with assessing provider clinical competency, which requires a fair process built around relevant data and shareable outputs.

Evaluate provides the process, content, and data needed to support a comprehensive assessment of a provider’s clinical performance.
